Healthy Mobilities?

13th Cosmobilities Conference

Invitation and Call for Papers

The relations between mobilities and health have been considered to be a central feature of today's global society (Gatrell, 2011). Too much movement has often been attributed to various illnesses including bodily disruptions such as seasickness and jet-lag as well as mental ill-health such as homesickness, phobias. However, travel is also seen as being 'good for the soul', part of quasi -spiritual quests to become more healthy in mind and body. Such human mobilities require healthy environments which are sustainable and resilient. Healthy mobilities need to be major goals for policies aiming at sustainable and liveable cities and environments. Following the success of the previous Cosmobilities Conference on Sharing Mobilities, we would like this 13th Cosmobilities Conference to focus on the plethora of healthy and unhealthy aspects and relations of mobilities. Hence, we would encourage interested researchers to submit abstracts for consideration by 30th April 2018 on the following themes:

Healthy environments, sustainability and resilience

Mental health and mobility disruptions

Hospitality and wellness tourism and travel

Healthy/unhealthy food mobilities

Lifestyle mobilities and the care of the self

Health practices of walking, running, swimming

Mobile embodiment of sickness and phobias
